

WHAT'S IN YOUR VAPE?

What's In Your Vape?

September 26, 2019

With all the questions surrounding Vapes lately, it's a good time to talk about Nova's quality policy. Just as we have never sold untested flower, SINCE DAY ONE Nova has never sold any vape cartridges that contain cutting agents such as MCT, PG, PEG, VG, or Vitamin E Acetate.

Before we stock a product, we ask our vendors what ingredients they use, we visit their facilities, we try the products, and we require test results. We encourage you to do your research! Below are quality statements, specifically on cutting agents, from each of our vendors:

K.I.N.D.

"The K.I.N.D. Live Resin cartridges and vape pens contain no cutting agents like propylene glycol or vegetable glycerin, which allows us to bring you an all-natural, purely organic cannabis experience with no GMO."

Cresco

"Cresco Labs Liquid Live Resin products are a pure cannabis extract that does not contain any cutting agents."

Timeless

"We believe in putting our patients first, with our Timeless Vapes never containing solvents or fillers and only using all-natural Terpenes to enhance our product. There is no PG, PEG, VG, MCT in our cartridges ever. Our cartridges only contain cannabinoids and terpenes – no fillers, additives, or cutting agents, etc."

"Just as we have never sold untested flower, SINCE DAY ONE Nova has never sold any vape cartridges that contain cutting agents such as MCT, PG, PEG, VG, or Vitamin E Acetate."

KAYA

“No MCT, PEG, VG, or PG.”

Sublime Brands

“We take the severity of the recent health reports regarding e-cigarettes seriously, and offer testing results for batch specific vape products. These tests will show any residual solvents, purity of distillate, and terpene profiles of the products. Sublime Brands’ vapes do not use any of the following ingredients: Vitamin E Acetate, Polyethylene Glycol (PEG), Propylene Glycol (PG), Vegetable Glycerin (VG), or Medium Chain Triglycerides (MCT).”

Evolab

“At Evolab, we use nothing but cannabis in our products, which means developing a wholly unique process to extract and purify cannabis terpenes, terpenoids, and flavonoids into what we call CDCA, a Cannabis-Derived Cutting Agent. With nothing in between you and the plant, you can rest comfortably enjoying Evolab’s entire line of products.”

MuV

“MÜV™ does not use other cutting agents such as coconut (MCT) oil, PG, VG, PEG, or the recently publicized vitamin E acetate in any MÜV Vape Pens as these additives have been shown to be potentially harmful and even deadly. The only ingredients are botanically sourced and cannabis-derived terpenes are used in every pen we make.”

We encourage you to do your research and only buy products in licensed and reputable dispensaries. The Nova Dispensary team is always happy to answer questions about any of our products!
